Kaifeng Xiaotong Electric Power Equipment Co., Ltd.

Company Profile — Xiaotong Electric

Kaifeng Xiaotong Electric Power Equipment Co., Ltd. was founded in 2021 and is located at No. 9, North of Xianping Avenue East, Tongxu High-tech Development Zone, Kaifeng, Henan, China, with registered capital of RMB 12 million. Our production base covers 31,284 m² with 14,892 m² of built-up floor area. We develop, manufacture and sell power equipment in-house, with an annual capacity of 20,000 concrete poles and 55,000 sets of electrical equipment. Located in eastern Henan, we draw on the region's complete power-equipment supply chain and convenient road logistics to keep supply stable for customers at home and abroad.

What We Make

We run two product lines on one site. The pole line produces reinforced and partially prestressed spun concrete poles — conical poles for distribution lines, telecom networks and street lighting, in custom lengths and load classes. The equipment line covers nine series and 54 models: JP integrated distribution cabinets, meter boxes, cable branch boxes, distribution boxes, package substations, high- and low-voltage switchgear, PV combiner boxes, ring main units and distribution transformers.

Every key process is in-house: laser cutting, stamping, CNC bending, welding, powder coating, centrifugal spinning, steam curing, injection moulding, final assembly and routine testing. Because nothing critical is outsourced, we control quality, lead time and cost at the source.

Customisation & Quality

Most of our equipment is built to order. Through our OEM/ODM programme we customise logos and nameplates, RAL colours, cut-outs and gland plates, internal layouts and busbar configurations, non-standard dimensions and export packaging, starting from modest minimum quantities. Send us a drawing or a specification and we confirm feasibility and pricing within 12 hours. Mass production starts only after sample approval, so what you receive matches the drawing.

Raw materials are inspected on arrival and every batch is inspected before dispatch. Enclosures are designed in line with IEC 62208 and IEC 60529, and testing can be arranged on request. A test report is available for your order on request.

Markets & Service

We supply utilities, contractors, panel builders and distributors, with a focus on Southeast Asia, the Middle East, Africa and Latin America. Equipment ships fully assembled or in flat-pack (SKD) kits to save freight; a container loading plan is prepared for every order, together with the full set of export documents — commercial invoice, packing list, certificate of origin and test reports as agreed.

Our standard terms are T/T 30% in advance and 70% against a copy of the bill of lading, with L/C at sight negotiable for large orders. We quote EXW Kaifeng, FOB and CIF, and every product carries a 12-month warranty. Every enquiry is answered within 12 hours.

We are not after one-off deals: with stable quality and lead times, we aim to be the manufacturing partner you keep in China.
